Personal Summary

From a young age been learning about everything there is to learn with Computers. In Highschool I excelled at all programming courses, and I enjoyed the many different aspects of computers, so I knew that Computer Science was the thing I'd love to pursue the rest of my life.

The Interest I specifically have in the Industry is Artificial Intelligence, where I have learnt the basic concepts through papers in The University of Waikato and abroad in The Chinese University of Hong Kong. I'd like to continue to expand my current knowledge of AI through the rest of my career and end up leading a team to supply the future needs of the world.
